

Intern (m/f) or working student (m/f) developer (Vue.js)

Location: Munich

Help build the next impact unicorn: Digital mentor for the pursuit of happiness

zantor is a digital mentor delivering science-based inspiration for the pursuit of happiness, and helping turn ideas into projects to realize them with liked-minded people.

We envision a society in which every life is a continuous exploration of fulfilling things – with changes seen as opportunities. We are a team of professionals working together on something meaningful: Fostering individual happiness and building a more positive society.

Our product is live with great feedback from customers, but we need to take zantor to the next level. For this, we are looking for a kick-ass developer who is excited about doing the right thing and helping us turn zantor into an impact unicorn.

Key challenges:

- Refine our Vue.js web app to improve UX and performance
- Develop new features and functions to expand our offering, e.g. an eCom solution
- Build the foundation for our “formula towards happiness”, based on machine learning/AI, matching user profiles to inspiration for happiness

Skills required

- Some experience in Vue.js or as full stack developer in *.js
- Focus on web platform, web apps, and API development
- Understanding of databases and cloud architecture (Firebase)
- Ideally affinity for Machine Learning/AI
- A passion for great UX

What we offer

- You’ll be working directly with the founders on the big ideas
- A great team with decades of experience & a great start-up network in UK & DE
- A chance to become one of our first hires, and shape the next impact unicorn
- The passion for a meaningful cause and a long-term perspective
- Fair compensation
